CARRER OBJECTIVE

Results-driven Data Scientist & Power BI Developer with 4+ years experience in machine learning, data visualization, and predictive analytics. Skilled in transforming raw data into actionable insights for manufacturing, academic, and research domains. Strong background in Python, SQL, and Power BI, with a proven ability to improve performance, optimize processes, and communicate insights to business stakeholders.

EXPERIENCE

Forward Deployed Engineer | *Actual Reality Technologies*

Jul 2026-Ongoing

- Partner directly with Unison health to understand complex business problems and optimize day-to-day operational processes across the organization.
- Provide targeted AI/ML assistance and process automation solutions tailored to the specific workflows and needs of HR, IT, and other specialized cross-functional teams.

Data Scientist | *Actual Reality Technologies*

Jan 2025-Ongoing

- Developed and deployed a live analytics engine for a healthcare insurance client, evaluating claim-routing strategies to lower-cost in-network providers and identifying approximately \$180K in projected savings to support provider negotiations and network optimization decisions.
- Designed, developed, and deployed a production KPI dashboard for Libbey Glass, providing real-time visibility into critical manufacturing KPIs for 10+ stakeholders, including executive leadership (CFO, CIO) and plant operations teams, enabling data-driven daily decision-making.
- Designed and implemented an automated alerting system for a manufacturing facility using historical alert data, resulting in 10% reduction in energy consumption and 20% improvement in critical resource lifespan.
- Reduced manufacturing energy costs by 4% through the development of analytics-driven process optimization solutions, enabling more efficient furnace operations and resource utilization.
- Developed AI agents leveraging Claude, GPT, and Gemini models to automate construction drawing analysis and material estimation workflows, reducing manual review effort and improving estimation accuracy.
- Designed and developed Power BI dashboards for monitoring chemical exposure limits, enabling manufacturer to assess and compare safety compliance across multiple plants using chemical sample data.
- Conducted an in-depth analysis of health and safety incidents around long weekends, revealing a 30–40 incident increase post-holiday periods and supporting improvements in safety planning.

PowerBI Developer | *Bowling Green State University*

Aug 2023-Jan 2025

- Developed and maintained 5 live interactive Power BI dashboards and enterprise data models, supporting strategic decision-making in financial and facilities management for campus planning and operations team.
- Built advanced DAX measures and M Query transformations to address complex reporting requirements and enhance data integrity.
- Optimized data models and reports for performance and user experience, achieving a 25% improvement in load times.
- Managed deployment and governance of Power BI Service workspaces, including dataset refreshes, user permissions, and security configurations.

ML Research Intern | *MyEdMaster*

Dec 2022 - June 2023

- Developed a machine learning model to estimate biological age using health and lifestyle questionnaire data from the NHANES public dataset (20K records).
- Engineered features from physiological, behavioral, and medical variables to train regression models (Random Forest, XGBoost, ElasticNet).
- Evaluated model performance using MAE and $R^2=0.89$ metrics; interpreted feature importance to identify key aging-related predictors.

EDUCATION

Masters in Computer Science

Bowling Green State University, Bowling Green, Ohio

May 2025

GPA: 3.8/4

Bachelors of Technology, Computer Science

Jawaharlal Nehru Technology University, kakinada, India

June 2023

GPA: 8.0/10

SKILLS

Technical skills | *Computer Science*

- **Programming & Data Science:** Python, SQL, Spark, Pandas, NumPy, JavaScript, Git, Excel
- **Machine Learning & Statistics:** Regression Analysis, Random Forest, XGBoost, LightGBM, Keras, Clustering, Unsupervised Learning, PCA, A/B Testing, Cross-Validation, Model Evaluation, Predictive Analytics
- **Time-Series & Alert Analytics:** Alert Analysis, Anomaly Detection, Trend Analysis, Statistical Thresholding
- **Data Visualization & BI:** Power BI, Tableau, Matplotlib, Seaborn, Plotly, KPI Dashboards, Data Storytelling
- **Big Data & Cloud:** Databricks, Distributed Computing, Cloud-based Systems, Terraform
- **Advanced Analytics:** Generative AI, Natural Language Processing (NLP)
- **AI Agents & LLMs:** Anthropic Claude, OpenAI GPT, Agentic AI Systems, Prompt Engineering, RAG, Multi-Agent Workflows, Function Calling, AI Application Development
